

Business Manager - Tech & AI, Investment Banking

Investment Banking is growing, and technology and AI are central to enable this ambition. As Business Manager for Tech & AI, you will connect strategic thinking with practical delivery, helping translate emerging capabilities into real business value. This is an opportunity to work at the intersection of Investment Banking and technology.

What you will be doing

You will join the Investment Banking Business Management team, working closely with technology team and senior management, frontline bankers and product areas across Corporate Finance, Equity Capital Markets, Debt Capital Markets, Corporate Loans, and Leveraged Finance. The team operates with a high degree of ownership and collaboration, and you will serve as the critical link between business needs and technology solutions, reporting directly to the Head of Business Management.

Your primary responsibilities will include:

- Shaping the AI and IT roadmap in line with business priorities and stakeholder needs.
- Advising senior management on technology strategy and emerging opportunities.
- Executing AI and technology solutions that improve workflows, productivity, and quality.
- Connecting frontline bankers and developers to improve solution usability and outcomes.
- Owning coordination of technology processes, controls, documentation, and lifecycle management.

About you

- 5-10+ years of experience from a business and/or technology perspective within financial services, Investment Banking, Capital Markets or a related area.

- Demonstrated track record in client-facing business transactions or technology-led business development, digital transformation or AI implementation.
- Ability to translate business needs into clear requirements for technology and data teams, and make it happen.
- Sound commercial judgement applied to business cases, success measures, and value realisation.
- Understanding of AI governance, data, model risk, compliance, and responsible technology use.
- Effective at managing senior stakeholders and communicating complex topics clearly.
- Relevant degree in finance, economics, business, technology, engineering, or a related field.

If you do not meet every criterion above but bring relevant experience from adjacent areas such as wholesale banking, product ownership, or technology consulting, we would still welcome your application.

What we offer you

You will gain broad exposure to Danske Bank's Large Corporates and Institutions business, working alongside senior leaders and specialists on priorities that matter. The role offers significant responsibility, room to grow your expertise across both Investment Banking and technology, and a collaborative team culture that values clear thinking and practical delivery. We work on a hybrid basis, with 3 to 4 days per week in the office.

Are you ready for the next step?

If this sounds like the right opportunity for you, we encourage you to apply. For questions about the role, please reach out to Head of Business Management Frederik Løkkegaard at frlk@danskebank.dk.

We review applications on an ongoing basis, so we encourage you to apply as soon as possible.

We look forward to hearing from you!
