

Solution Architect / IT Solution Owner – ERP-to-Bank

Join us in building a new strategic integration capability

Are you motivated by shaping new solutions from the ground up? Do you enjoy turning complex business ambitions into secure, scalable technology?

We are establishing a new team in the Customer & Sector Integration tribe to accelerate ERP-to-Bank. The initiative will enable corporate customers to securely share ERP data with Danske Bank, creating opportunities for automated financial processes, improved customer experiences and data-driven products and advisory. You will help determine how Danske Bank connects directly with ERP platforms and through ERP data aggregators, and how ERP data can be securely acquired, governed and made available to internal consumers.

As Solution Architect and IT Solution Owner, you will set the technical direction and lead the architecture of this new solution area. You will work closely with the Product Owner, engineers, internal stakeholders and external ERP ecosystem partners.

You will

- Define and drive the solution architecture for ERP-to-Bank.
- Act as IT Solution Owner for the solutions established within the domain.
- Translate business needs into secure, scalable and maintainable designs.
- Shape integrations with ERP platforms and ERP data aggregators.
- Establish architectural principles, solution boundaries and technical roadmaps.

- Guide decisions related to APIs, data, security, identity and cloud technologies.
- Ensure alignment with enterprise architecture, regulatory requirements and technology standards.
- Coordinate dependencies across business areas, tribes and external partners.
- Support engineers through technical guidance, sparring and architecture reviews.

The combined role brings responsibility for both technical direction and the lifecycle, governance and operational health of the solutions.

About you

- At least five years of experience in software engineering, solution architecture or technical leadership.
- Current experience as a solution architect, technical lead or IT Solution Owner.
- Strong experience designing integration-heavy, business-critical solutions.
- Knowledge of API-based, event-driven and cloud-native architectures.
- Experience designing secure integrations with customers or external partners.
- The ability to communicate complex technical topics to both technical and business stakeholders.
- A collaborative and pragmatic approach to architecture and delivery.

Experience with banking, ERP platforms, accounting data, payments, cash management or third-party data providers would be an advantage.

Why join?

You will join a new team and help define the architecture, integration model and technology choices from the beginning. It is an opportunity to work at the intersection of banking, ERP ecosystems, data and modern integration technology, while turning a strategic ambition into a sustainable production capability.

The workplace can be in Lithuania or Denmark. If you are hired in Lithuania, the monthly salary range: from 5760 EUR to 8640 EUR gross (based on competencies relevant to the role).

Your title in job contract will be Software Architecture.

Interested?

Interviews will be conducted on an ongoing basis, so we encourage you to apply as soon as possible.

Please include a short motivational letter with your CV. If you have questions about the position, contact Tribe Architect Kenneth Mejnert on mejn@danskebank.dk
