

Platform Engineer

Banking hasn't changed much in decades. We're changing that. One product at a time.

Lunar is a Nordic challenger bank building the future of financial life with AI at the core. Our engineers, designers, and product people work on problems that actually matter. Making money simpler, smarter, and more rewarding for a million of registered users across the Nordics.

Fully licensed and founded in 2015, with offices in Copenhagen, Aarhus and Stockholm.

We move fast, we build with purpose, and we're just getting started.

As our new Platform Engineer you'll join Esa, our Developer Enablement squad based in Aarhus, reporting to Jonas, working to build the invisible resilience that lets our product squads ship faster and more securely. You'll be one of five hands-on engineers running our platform as a product. You'll take operational friction off our feature teams so they can focus on shipping great products.

What will you do?

- Define and enforce patterns for resilient, cloud-native microservices that are observable, cost-efficient, and easy to maintain.
- Run, troubleshoot, and optimise the open source and cloud-native systems our platform runs on, keeping it highly available and reliable for the business.
- Own the lifecycle of our high-availability Kubernetes clusters in AWS, including the upgrade cycle every four months.
- Evolve our asynchronous messaging backbone and critical database systems for performance and reliability. You'll also help shape our next-generation environments, including sovereign cloud and AI-optimised infrastructure

operations.

- Solve distributed systems challenges in a highly regulated environment, treating security and compliance as engineering constraints to design around, not roadblocks.

What are we looking for in you?

- **Platform Experience:** 3+ years of experience in a Platform, SRE, or DevOps role, ideally working with Terraform or similar IaC tools.
- **Developer Empowerment:** You empower fellow engineers to deliver great outcomes at increased speed and reliability.
- **Kubernetes & AWS:** Hands-on experience running workloads in Kubernetes and managing core cloud services in AWS.
- **Database Foundations:** Practical experience with relational databases, preferably PostgreSQL. You should be comfortable with basic performance tuning and managing RDS instances.
- **Message Brokers:** Hands-on experience with asynchronous communication patterns and managing message queues, particularly RabbitMQ.
- **Observability and production reliability:** You know how to make systems diagnosable, not just running.
- **Cloud networking:** VPCs, routing, DNS, private endpoints and connectivity patterns.
- **Automation Curiosity:** A strong desire to automate repetitive tasks and an interest in how AI/LLMs can be used to improve the developer lifecycle.

What you get.

- 4 days in the office. We're a team that builds together, thinks together, and moves together. Showing up is part of how we work.
- State of the art equipment. The newest computer, monitor, mouse, and keyboard. We want you to do your best work without anything slowing you down.
- Pension, health insurance, and enhanced parental leave. From your financial future to your family moments. We've got you covered.

Are you ready to join the journey? Apply now and let's find out more!

While you hold on tight for us to get back to you, curious to see what we're up to? Follow us on LinkedIn for business announcements and releases , check out our Instagram for an inside scoop on what it's like to work here .

Depending on the regulations in the country where you will be employed, we will ask to see or obtain information about your criminal record. Please note that our employment is conditional upon you not being registered in RKI (Ribers Kredit Information).

We welcome applications from candidates of all backgrounds. If you need any adjustments during the recruitment process, please let us know
