

Backend Engineer

Backend Engineer

Join our Markets Business Technology team as a Backend Engineer in the Research & Content Generation Squad and build robust, scalable systems that power our research ecosystem. You will design and develop backend solutions for the research platform, handling critical financial data, research publishing, and distribution workflows alongside colleagues who value technical craftsmanship. This role offers the opportunity to contribute to core architecture decisions and grow your expertise in a collaborative, learning-focused environment.

What you will be doing

Working within the Research & Content Generation squad, you will develop and maintain backend services and integrations that support the generation, management, and multi-channel distribution of research. You will collaborate closely with Product Owners, UI engineers, Business Analysts, and research stakeholders across Wholesale Banking to deliver reliable, high-performance solutions that modernize research workflows and meet the demanding standards of financial markets.

- Design and implement backend services using modern development practices
- Optimize database performance and ensure data integrity across systems
- Build resilient message processing solutions for high-frequency trading scenarios
- Collaborate with cross-functional teams to define technical requirements and solutions
- Monitor application performance and implement improvements to system reliability

About you

- Experience with .NET Core for building scalable backend applications
- Proficient in SQL Server database design, optimization, and management

- Experienced with RabbitMQ for message queuing and distributed system communication
- Understanding of Elasticsearch for data indexing and search capabilities
- Ability to work independently while contributing effectively to team objectives
- Problem-solving mindset with attention to detail in complex technical environments

Experience with AWS cloud services would be valuable as we continue expanding our cloud infrastructure.

What we offer you

You will join a supportive team that values continuous learning and technical growth. We offer opportunities for professional development and the chance to work on meaningful projects that directly support our business goals. Our hybrid working model allows 3-4 days per week in the office to foster collaboration and knowledge sharing.

Who We Are

You are joining the **Research & Content Generation (RCG)** squad, part of the **Banker Productivity** domain within **Markets Business Technology (MBT)**. We are a cross-functional, distributed team across Denmark and India spanning product management, business analysis, UI engineering, and backend development.

Are you ready for the next step?

We would love to hear from you if this opportunity resonates with your career aspirations. For questions about the role, please reach out to Suresh Kette at suket@danskebank.dk. Please submit your application by October 13th 2026.

We look forward to hearing from you!
