

Senior Finance Systems & Data Engineer

Banking hasn't changed much in decades. We're changing that. One product at a time.

Lunar is a Nordic challenger bank building the future of financial life with AI at the core. Our engineers, designers, and product people work on problems that actually matter. Making money simpler, smarter, and more rewarding for a million registered users across the Nordics.

Fully licensed and founded in 2015, with offices in Copenhagen, Aarhus and Stockholm.

We move fast, we build with purpose, and we're just getting started.

As our new **Senior Finance Systems & Data Engineer**, you'll join the **Controlling & Transformation team** based in **Copenhagen**, working to turn messy finance data into infrastructure the whole company can trust.

To be upfront: the pipes are still being built. You won't inherit a polished warehouse — you'll be the person who helps shape what it will look like. This is a role for someone who wants ownership of a foundation, not a seat next to one.

What will you do?

- Own the design of Lunar's financial data architecture, the flows from our core banking platforms through the ledger and data warehouse into Business Central, and set the direction for how it evolves
- Lead the automation of the month-end close, replacing manual steps cycle by cycle until it's fast, reliable and boring, starting with the reconciliations between source systems and the general ledger
- Get hands on when data issues appear. You'll query the data yourself, reconcile it, find the root cause and drive it to resolution rather than passing it on

- Be the system owner for Business Central and other relevant finance systems, covering configuration, access, releases and incidents, and hold tech and external vendors to designs that work for finance from the start
- Act as the bridge between finance, product and tech: set the standard for data quality across finance source systems, translate finance's needs into requirements the data squads can build against, and rethink core processes with AI

What are we looking for in you?

- 8+ years in an architect, engineering or finance systems role, with a track record of owning work end to end rather than picking up tickets
- Strong hands-on SQL and Python for extracting, transforming and modelling data, and comfortable integrating systems through APIs & MCP's
- You've worked close to a month-end close and know why cut-off, reconciliations and audit trail matter
- Confident with senior stakeholders and technical peers alike. You can push back, read a data model, see what it will break in finance and not be afraid to speak up.
- Experience owning or administering a finance system such as an ERP, and building with LLMs or agent tooling such as MCP, or a clear appetite to learn. Core banking & Business Central experience is a strong plus

What you get

- 4 days in the office. We're a team that builds together, thinks together, and moves together. Showing up is part of how we work.
- State of the art equipment. The newest computer, monitor, mouse, and keyboard. We want you to do your best work without anything slowing you down.
- Pension, health insurance, and enhanced parental leave. From your financial future to your family moments. We've got you covered.

Are you ready to join the journey? Apply now and let's find out more!

While you hold on tight for us to get back to you, curious to see what we're up to? Follow us on LinkedIn for business announcements and releases , check out our Instagram for an inside scoop on what it's like to work here.

We welcome applications from candidates of all backgrounds. If you need any adjustments during the recruitment process, please let us know.

Depending on the regulations in the country where you will be employed, we will ask to see or obtain information about your criminal record.
